Brothers Bait Bag

Invented by James Andrew Waddy

Brothers Bait Bag

Designed by Andrew and Kevin Waddy, James Becker, and Andrew Williams

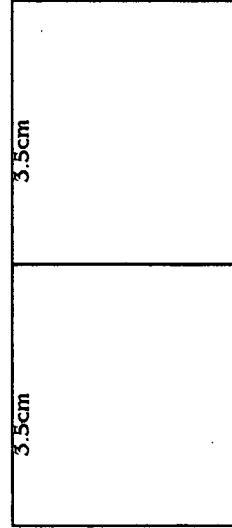

The Brothers Bait Bag is a square shaped bag, measuring 3.5 cm high and 3 cm long, made of nylon stocking material. It is stitched on three sides using cotton thread. On the top of the bag an elastic string measuring 12 cm is used to secure the bag and bait to the hook. The bag is scented using a natural crab scent. It is used by fisherman using it to help secure and prolong the use of soft baits, such as crab, cut bait, etc. The bags are designed for but not limited to surf and pier fishing where bottom fishing tackle is used.

Directions for use:

- 1) Place desired bait on hook.
- 2) Carefully pull bag over hook and bait.
- 3) Pull draw string tight at the point where the line meets the hook, tie a knot to secure.
- 4) Use remaining thread to wrap around bait and bag to further secure.
- 5) Cast.

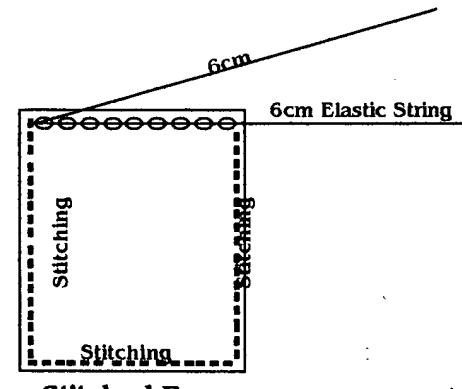

The crab scent in the nylon bag is released by the water, intensified by the bait on the hook, provoking fish strikes. The bags are designed primarily for the attraction of Rockfish and weakfish.
